

Control Systems Engineer

We are a small but well respected technical distributor and systems integrator operating in the industrial control systems market, primarily in the PLC, HMI and SCADA fields. We operate worldwide, in a broad spectrum of industries and have numerous 'blue chip' customers.

We currently have a vacancy for an enthusiastic, dynamic engineer whose primary duties would be the design, development, commissioning and support of industrial control systems and software. Projects often involve the upgrade of existing lines as well as the development of new schemes.

All applicants should have a degree in a relevant field and previous experience gained using modern industrial controls. Whilst applicants must be able to demonstrate a sound knowledge of PLC and HMI programming techniques, manufacturer specific training would be arranged.

The position is based at our offices in Bridgend but the successful candidate would attend customers' sites in relation to our ongoing projects and service support. It is therefore essential that applicants hold a full UK driving licence.

The package on offer includes a competitive salary together with performance bonuses and 5 weeks holiday per annum. Hours are nominally 08:00 to 16:30 with a 14:00 finish on Fridays but a certain amount of flexibility whilst onsite is expected.

Please contact us in writing with a resume of your qualifications/experience and include any points that you feel may be of benefit to our organisation:
